EXAMINER KEYS, ROSALYND ANN				
ART UNIT 1621		PAPER NUMBER		
MAIL DATE 10/24/2008		DELIVERY MODE PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/549,611

Applicant(s)

SAMUELSSON ET AL.

Examiner

ROSALYND KEYS

Art Unit

1621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 July 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 31-52 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 31-52 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Status of Claims

1. Claims 31-52 are pending.
Claims 31-52 are rejected.
Claims 1-30 are canceled.

Response to Amendment

Oath/Declaration

2. The new oath is in compliance with 37 CFR 1.67(a).

Claim Rejections - 35 USC § 112

3. The rejection of claims 4, 5, 8, 10, 11, 14, 21, and 27 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention is withdrawn, due to the amendment filed July 7, 2008.

Claim Rejections - 35 USC § 102

4. The rejection of claims 22-26 and 28 under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Roach et al. (US 2,585,035) in view of Hoover (US 1,934,309) and Scott (US 2,183,847) is withdrawn, since these claims have been cancelled.

Response to Arguments

Claim Rejections - 35 USC § 103

5. Applicant's arguments with respect to claims 1-30 under 35 U.S.C. 103(a) as being unpatentable over Roach et al. (US 2,585,035) in view of Hoover (US 1,934,309) and Scott (US 2,183,847) and further in view of Arundale et al. (US 2,421,862) have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

6. Claims 9, 11, 18, 21 and 23 are objected to because of the following informalities: In claim 9 the compound 2-alkyl-2-hydroxyalkoxy-1, 3-propanediol is misspelled; in claim 11 the compound trimethylolpropane is misspelled; in claim 18 the compound 2-alkyl-2-hydroxyalkyl-1, 3-propanediol is misspelled; in line 2 of claim 21 the word least is misspelled; and in claim 23 the word diallyl is misspelled. Appropriate correction is required.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 31-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roach et al. (US 2,585,035) in view of Hoover (US 1,934,309) and Scott (US 2,183,847) and further in view of Burger et al. (US 3,290,388) and Arundale et al. (US 2,421,862).

Roach et al. inherently teach a process for the production of an allyl and/or methallyl ether of a tri or polyhydric alcohol wherein said process comprises the claimed steps i) and ii) (see entire disclosure, in particular column 2, lines 30-55; column 4, line 55 to column 6, line 38; the examples and claims 1-10, 16-24, and 26). The Examiner believes that the instant invention is inherently taught by Roach et al. because during

the normal course of operation of the process of Roach et al. a cyclic formal compound is formed and said cyclic formal is etherified to yield an allyl and/or methallyl ether of said cyclic formal, which is then reacted with at least one alcohol during the extraction step taught by Roach et al. yielding the claimed allyl and/or methallyl ethers of a tri or polyhydric alcohol. The cyclic formal starting material is a by-product produced during the synthesis of the polyhydric alcohol of Roach et al. (see Roach, in particular column 5, line 70 to column 6, line 11; Hoover, in particular column 1, lines 6-9 and Scott, in particular page 2, left column, lines 22-47), which results in a substantial saving in the economics of the process (see column 5, line 70 to column 6, lines 11). A suitable temperature for step i) includes a temperature of 70-110°C, although lower or higher temperatures may be used (see column 5, lines 1-6). The unsaturated ether product may be further purified via extraction and distillation (see column 5, lines 15-25). Considerable variation in the polyhydroxy compound is possible (see column, lines 18-60). Thus, the use of the claimed cyclic formals is inherently taught or suggested. The basic catalyst includes a strong caustic solution such as 50% NaOH or basic substance of similar nature (see column 4, line 69 to column 5, line 1).

Roach et al. fail to teach that in addition to the extraction step the alcohol can be used to react with the allyl and/or methallyl ether of the cyclic formal. Roach et al. also fail to teach the temperature at which this reaction occurs and fails to teach the use of a catalyst.

Burger et al. (US 3,290,388) teach a process wherein allyl ethers of m-dioxanes are prepared by reacting the sodium or potassium salt of the corresponding

dioxolanemethanol or dioxanol with an unsaturated halide such as methallyl chloride (see entire disclosure, in particular column 1, lines 8-43). Following this reaction Burger et al. also disclose a process for the conventional hydrolysis or alcoholysis of the obtained dioxanes in the presence of an acid catalyst to obtain the corresponding ethers (see column 1, lines 51-68). The compounds disclosed by Burger et al. are analogous compounds to those disclosed by Roach et al.

Arundale et al. teach a process wherein cyclic acetals or unsaturated derivatives thereof are converted to the corresponding polyhydric alcohols or unsaturated derivatives thereof by treating said cyclic acetals or unsaturated derivatives thereof with an alcohol in the presence or absence of an organic catalyst, such as toluene sulfonic acid at varying temperatures, in accordance with the reactants used, but ordinarily between 50° and 150°C, and the resultant product is recovered by vacuum distillation (see entire disclosure, in particular column 1, line 30 to column 38; column 3, line 72 to column 4, line 29; column 5, lines 30-59; column 6, line 22 to column 7, line 13).

One having ordinary skill in the art at the time the invention was made would have found it obvious that following the extraction step with alcohol in the process of Roach et al. that any unsaturated ether of the cyclic formal present could be converted to the corresponding non-cyclic ether, as taught by Burger et al., since the process of Burger et al. uses analogous materials to those of Roach et al., the skilled artisan would have been motivated to carry out such reaction of Burger et al. using a temperature and catalyst shown to be effective for such reactions. Arundale et al. teach that in the presence or absence of a catalyst, at temperatures between 50° and 150°C, a cyclic

acetal will react with an alcohol to produce the corresponding polyhydric compound. Arundale et al. teach that the use of a catalyst will increase the reaction rate (see column 2, lines 1-4). The skilled artisan therefore would be motivated to utilize the temperature range and catalyst, as taught by Arundale et al., since Arundale has shown that such a temperature range is effective for converting a cyclic acetal to the corresponding polyhydric compound and that the use of a catalyst will increase the reaction rate. The claim would have been obvious because "a person of ordinary skill has good reason to pursue the known options within his or her technical grasp. If this leads to the anticipated success, it is likely the product not of innovation but of ordinary skill and common sense." KSR International Co. v. Teleflex Inc., 550 U.S.____, 82 USPQ2d 1385, 1395-97 (2007).

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROSALYND KEYS whose telephone number is (571)272-0639. The examiner can normally be reached on M, W, F 8 am-3:30 pm; T, Th 5:30 am-7 am & 9:30 am-5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel Sullivan can be reached on 571-272-0779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
